Lighting Power Supply	220V, 50HZ	220V, 50HZ

Quality and Stylish Design

Our Home Elevator combines latest designs and concepts from Europe and North America that suit your home in ways of compact structure coupled with quality finishes and stylish designs.

Green Technology

Our home lifts incorporate machine roomless system. Its low overhead design allows for space saving, cost saving during construction and enhances architecture aesthetics. It also consumes less power thus more cost savings.

Enhanced Safety

Advanced safety detecting technology such as light curtain door and various safety controller functions offers a fail-safe operation. The Automatic Rescue Device (ARD) enables the lift to automatically land at the nearest floor and the door will then open to allow passengers to be disembarked quickly and safely during a power failure.

Smooth ride

The home lift's VVVF controller is programmed to provide a smooth and comfortable ride for the lift passengers with accurate landing at each floor.

Standard Feature

Item	Standard	Option
